PROFESSIONAL

series

Commercial quality burglar and fire resistant safes. Ideal for apartments, private homes, businesses and executive offices.

Model PRO 1512DL

PROFESSIONAL

series

EMPIRE SAFE COMPANY, INC.,
the leading supplier of safes and vault rooms
to the world's finest jewelers
has developed a complete selection
of high quality safes for personal use
at an affordable price.

Streamlined in design, many models
fit conveniently into closets and alcoves,
under tables and desks, and in other locations
with limited available space.

DURACRETE BARRIER MATERIAL

This high strength composite cast barrier material is a main ingredient incorporated into our higher security commercially rated safes (Enterprise TL-15 and Quantum TL-30). DURACRETE has a minimum strength of 9000 PSI making it a formidable barrier to burglary attacks.

DOOR

The door (overall 4 $\frac{3}{8}$ " thick) is constructed of thick steel plates on all sides and encases the DURACRETE barrier casting. The door protects against multiple tool attacks including drills, power impact tools, wedging and forcing techniques. A hardened drill resistant steel plate further protects the lock and vital areas.

BODY

Enclosed between an outer and inner shell of electrically welded, penetration resistant steel is a casting of DURACRETE. This 2" thick wall provides an exceptional barrier against concentrated burglary attacks including hand and power tools.

BOLTWORK MECHANISM

1 $\frac{3}{8}$ " in diameter, solid steel chrome plated bolts engage deep within the boltwork chamber. Together, the live and fixed bolts secure the door in the locked position.

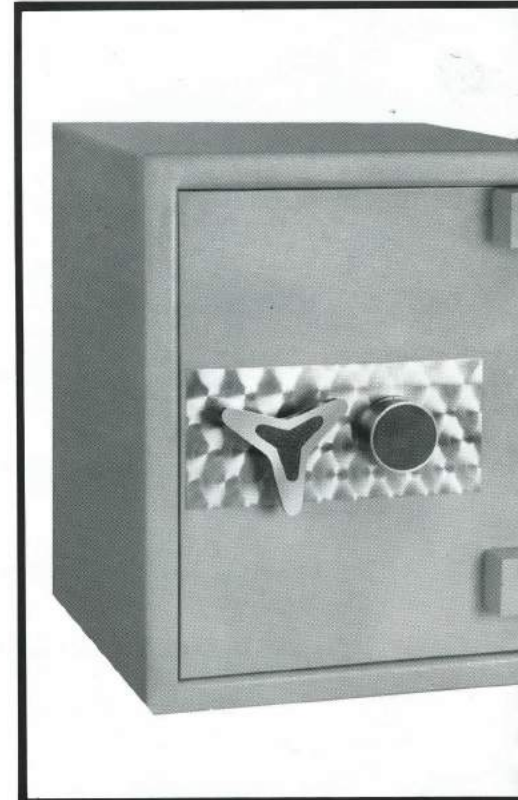

The boltwork chamber, an integral part of the safe body, is formed to accept the engagement of the door's bolts into the body as well as prevent the door from being forced inward when severely attacked.

RELOCKING MECHANISM

Additional protection from attack is provided by the incorporation of an independent mechanical relocking device. A concentrated burglary attack attempting to dislodge the lock from its position will activate this device securing the boltwork in the locked position.

HIGH TECH DIGITAL LOCK "DL" MODELS

Preferred 100 to 1 by our residential customers, this advanced technology lock provides the user with the ability to set one's own private access code. Easy to operate, this UL listed lock permits the user to

Model PRO 1814C

keep all valued possessions secure and accessible, with little or no inconvenience.

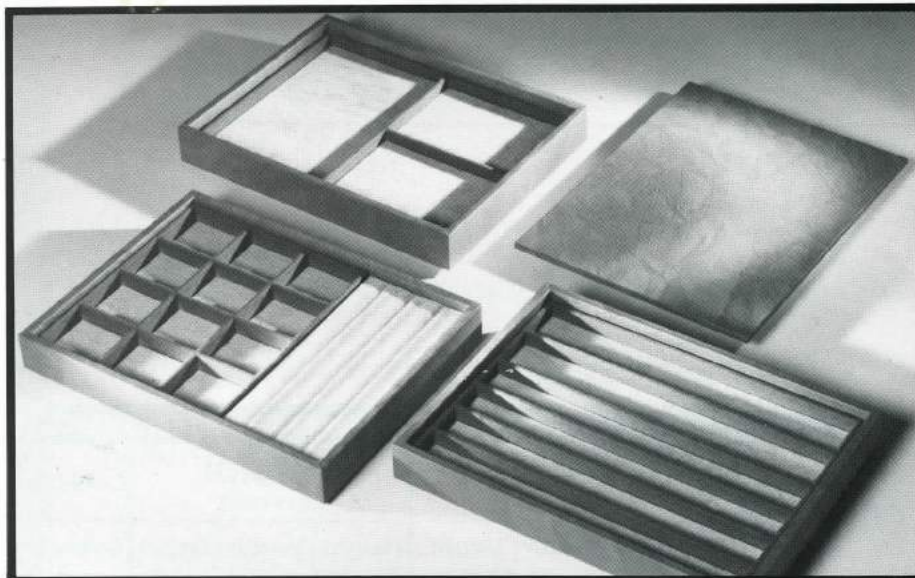

An automatic shut down feature is incorporated in these digital locks to help prevent code guessing.

A unique feature of this mechanism automatically locks the safe when the door is closed and boltwork extended to the locked position.

Digital locks are battery powered. Batteries are located on the outside of the safe for easy changing.

**COMBINATION LOCK
"C" MODELS**

For applications where the safe must be in a relatively public area, we recommend the use of our UL listed Group 2 keychangeable combination lock. Equipped with a spyproof dial, this lock is convenient for daily operation.

Jewelry Trays (optional)

FIRE PROTECTION

In addition to its burglary protection characteristics, the DURACRETE composite casting provides one hour fire resistance for the protection of paper documents.

OPTIONS

- Jewelry Trays
- Custom Cabinets (available in all finishes)
- Private Interior Compartments

DELIVERY

All safes are available for delivery throughout the United States and overseas.

Nationwide service. Complete coordination with architects, designers and contractors.

All safes can be prepared for anchoring.

HIGHER SECURITY SAFES

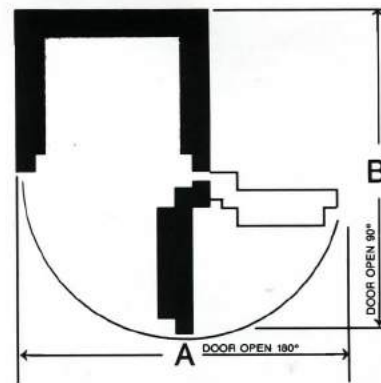

For increased burglary and/or fire protection we offer an extensive selection of safes to satisfy more demanding needs.
