BILTMORE "TL30 PLUS" SAFES

MODEL 1100

MODEL 350

MODEL 150

U.L.-LISTED TL30

Designed and manufactured by FICHET, the world's number one safe maker with 200 years of experience, the BILTMORE is possibly the "best TL30" on the market today.

U.L. TL30 Rating Plus:

- Protection against torches as well as tools. U.L. testers use only mechanical and electrical tools.
- Six-sided construction and protection. U.L. testers attack only the front of the safes.
- Fire protection in addition to burglary protection.
- Provision for anchoring all models to a concrete slab or a beam. Anchoring helps prevent removal of the safes by unwanted "movers".
- Adjustable and removable shelves designed to lock in place, which limits the access of a would-be intruder.

Construction:

Over 2½ inches of DRA-AGGAMIX, located in all six sides, body and door, provides both high burglary resistance against powerful mechanical tools and torches, as well as fire resistance.

DRA-AGGAMIX, a FICHET-exclusive material, is an extra hard, abrasive and fire-resistant agglomerate filled with metallic reinforcements.

In addition, the door and the frame of the door are reinforced with TORDBAR. TORDBAR is a strong-room-type reinforcement made of flat steel bars cut into strips running off a central bar and then twisted into a spiral shape. A ¼ inch drill-resistant steel plate is added to complete the defense barrier of the door.

Locking:

The BILTMORE'S standard lock is a high-security, U.L.-listed combination lock with one million possible combinations.

The boltwork assembly provides a three-way sliding bolt action, engaging heavy 1½ inch bolts into the body of the safe. It is completed by a locking bar on the hinge side.

The relocking system includes a glass plate and features a thermal and mechanical trigger mechanism. The relocking bolt is further protected by a cross pin which freezes the bolt in the locked position.

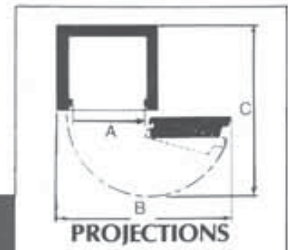

Options:

A MONOPOLE keylock can be added as a second independent lock. Patented by FICHET, this keylock is a maximum security pump lock which cannot be picked. Its unique key is undecipherable, anonymous and can be reproduced only at factory-owned locations.

Other options include a second combination lock, a key locking dial, a time lock, provision for the installation of an internal alarm, as well as several lockers or internal cabinets.

Finish:

The BILTMORE'S two-tone finish is of the highest quality to do justice to the FICHET name, with a light gray body and a deep blue door.
