

A Tradition of Integrity and Quality

The best evidence that Mosler has to support the integrity of its name and the quality of its products is through the customers that it serves.

Mosler is the name that you will find on . . .

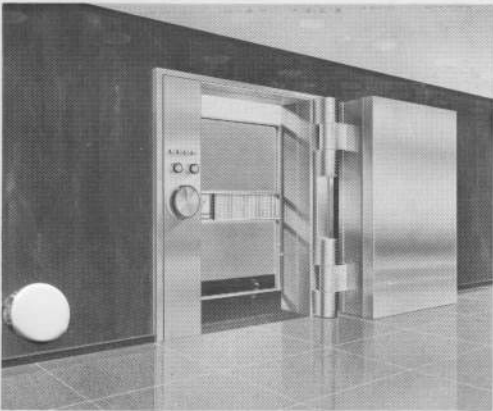

1 ... the United States Gold Storage Vaults at Fort Knox, Kentucky?

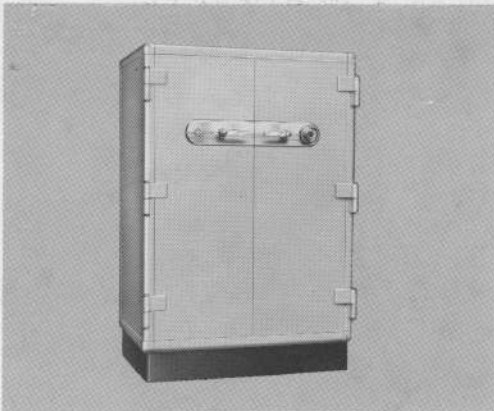

2 ... the 50-ton safe that guards the original Declaration of Independence, Constitution and Bill of Rights?

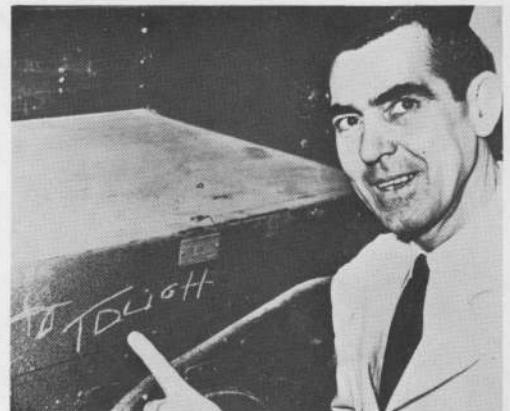

3 ... the famous bank vaults that withstood the Atomic Bomb at Hiroshima?

4 ... the protective equipment in the leading U.S. banks, and the majority of Federal Reserve Banks?

5 ... the famous record safe that has never failed to protect the vital records of businessmen from fire?

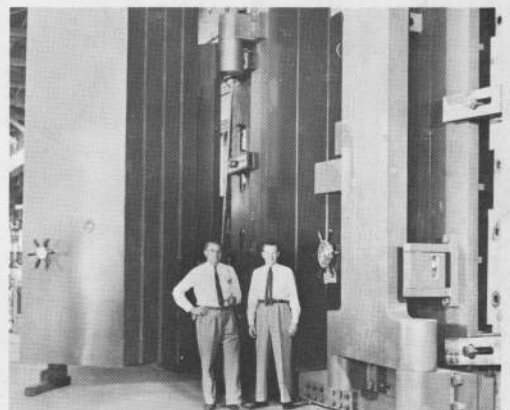

6 ... the famous armored steel money safes that burglars all over America have found "too tough" to crack?

7 ... the largest bank vault ever built located in the Chase Manhattan Bank in New York City?

8 ... the first vault officially tested by an atomic bomb? This vault survived intact according to official Atomic Energy Commission report.

9 ... the massive radiation doors for installation at Oak Ridge, Tennessee? The largest is 5' thick with a 11' W. x 15' H. clear opening.

On the other side of the integrity story are the many unique items protected by Mosler, two of which are the famous quill pen set used for the signing of the Declaration of Independence, and the golden spike of the Union Pacific Railroad that linked the East and West of America. Also, during the Civil War, one of our affiliates helped build the famous iron-clad Monitor that marked a turning point in naval history.

Were it possible to compute the total value of all that is protected by Mosler equipment, the sum would run into many billions of dollars. This is a great responsibility. Mosler feels that in order to uphold this responsibility, it is mandatory that its business philosophy be one of absolute integrity with the highest quality provided in its products and services.
